

Letter from the EDITOR

Alberta's Nanotechnology and Advanced Materials

No doubt about it: Nanotechnology and advanced materials have the power to revolutionize our lives in ways we are just starting to imagine, and likely outperform the impacts that electricity and computers have had on us.

The revolution is here: In this special issue, we show you companies that are ALREADY selling innovative products and services based on nanotechnology and advanced materials.

Take action: As always, *Cool Companies* magazine is about helping you, our readers, take action. In this issue, we put together the best business development resources to help you understand how to become part of the nanotechnology and advanced materials revolution. As there are plenty of opportunities for collaboration, you don't have to do it alone:

- **Companies:** Companies profiled in this issue are looking for strategic partnerships (p.10);
- **Industry Support:** High quality resources are available to help your company with its nanotechnology or advanced material product research, development and commercialization initiatives (p.40);
- **Research Expertise:** Leading researchers in nanotechnology and advanced materials have practical discoveries and opportunities for you to consider (p. 42-45, 48-51).

In this special issue, we have concentrated exclusively on the unique opportunities in Alberta's high-growth nanotechnology and advanced materials cluster. Companies from anywhere in the world can take advantage of working in collaborative partnerships with Alberta's companies, its industry support and its researchers. The Alberta Government is serious about fostering such collaborations. We would like to thank them for asking us to partner with them to produce this special issue.

Claudia Sammer
Founding Editor and Publisher
